

Cooling Fan 100 – 200

User manual

EN

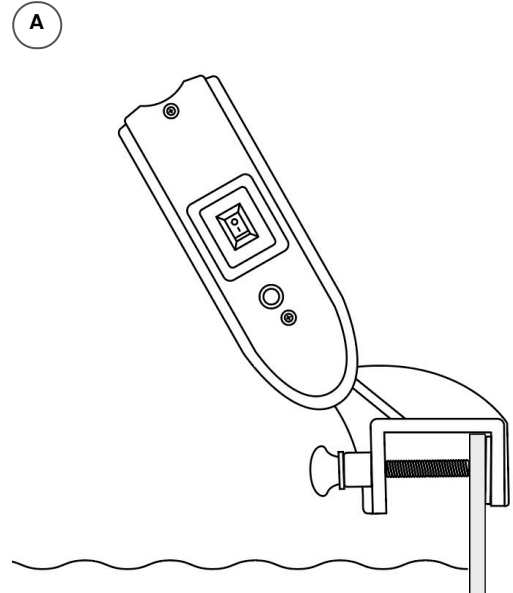

Function

The Blue Marine Cooling Fan will cool down the temperature of the aquarium water by 2 to 4°C. The constant air flow cools down the aquarium water through evaporation.

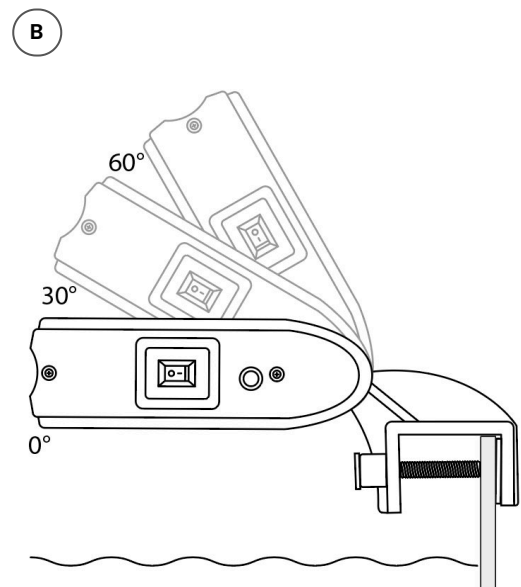

Installation

- A** Attach the Cooling Fan with the clamps to the aquarium edge above the aquarium and tighten securely (max. glass thickness 25 mm).

Connect the cable of the adapter to the device and put the plug in the socket.

- B** The Cooling Fan can be tilted (0°, 30° and 60°).

Maintenance

Regularly check the Cooling Fan for salt deposits.

Switch off the device and remove the plug from the socket before carrying out maintenance!

Remove any salt residues and clean the unit with a damp cloth. This will prolong the service life and operation of the Cooling Fan.

Cooling Fan	100	200
Fans	2	4
